Symposia: Readings in Philosophy
Created by the Ohio University Department of Philosophy, Pearson Custom Publishing, and you.

With Symposia: Readings in Philosophy, you can custom-build an introductory philosophy and ethics reader that truly reflects your teaching style, your course goals, your perspective. You choose the readings. You choose the sequence. You can even add your own work or other favorite materials. The result is a concise, beautifully produced volume you’ll be proud to share with your students.

What you get with Symposia: Readings in Philosophy

• Access to an archive of the best classic and contemporary writings in philosophy and ethics — writings that not only support teaching and learning the discipline, but also help spark student interest through their diversity and breadth.
• More than 300 readings, including both primary and secondary sources. Each reading is from 10-15 pages long.
• 27 additional readings from Prentice Hall’s Library of Liberal Arts series of core texts in philosophy, each 25-40 pages in length.
• Readings organized in 30 key topic areas, such as Democracy, Early Greek Ethics, Libertarianism, Existential Philosophy, Self and Personal Identity, etc. Each topic area includes an optional introduction to provide a contextual background for the readings.
• Effective and useful pedagogical apparatus. Each reading is accompanied by an introductory headnote, study questions guiding students to a better understanding of the reading’s key points, and optional custom glossary of key terms presented in the reading.
• All the benefits of traditional readers – quality scholarship and exceptional source materials – plus a much greater breadth and variety of readings that the Symposia database format allows. Rather than limit you to the 50-70 readings found in even the most extensive philosophy readers, Symposia offers 3-4 times as many articles from which to choose.
• The freedom to incorporate your work and other outside readings: We’ll obtain all necessary permissions.
• An easy selection process: It only takes an hour or two to review the material and make your choices.
• Maximum value for students: The book includes only the readings you’ll actually use in your course.
